

Doctor: Althea McPhail, MD	Patient: Dummy, John (G138123456)	Acc #: 2302060002
Address: 1420 Oakbrook Dr, 1420 Oakbrook Drive	Birth: 2/5/2014	Home Phone:
CSZ: NORCROSS, GA 30093	Age: 9	Collection Date: 02/06/2023 01:57 PM
Location: Omega Bioservices	Gender: Female	Received Date: 02/06/2023 01:57 PM

Test Name	Result	Flag	Reference Range	Comment
SARS CoV 2 RT PCR				
SARS CoV 2 RT PCR	Not Detected	Negative	NEGATIVE	

COVID19 REPORT ELEMENTS:

COVID-19 PCR Result NEGATIVE -- COVID-19 PCR test result was NEGATIVE. See Interpretation.

Negative / Not Detected results for SARS-CoV-2 do not rule out COVID-19 infection and should not be used as the sole basis for patient management.

Negative / Not Detected results must be combined with other information such as patient history, clinical observations and epidemiology. Resubmit if clinically indicated.

Your COVID-19 test did not detect any signs of COVID-19 virus. However, we recommend that you still take the following steps to help protect yourself and your family.

Recommendations

- A negative result means COVID-19 was not detected on the specimen collected from you at the time of this testing. Even with a negative test, there is a chance you could still have the virus. If your healthcare provider already gave you specific follow-up instructions, please continue to follow these directions. - Your test could be negative if the virus has not yet developed in your system. If you were in close contact with someone who has COVID-19, self-isolation is recommended for a period of 10 days from the time you were last exposed, even if your test came back negative. - Regardless of your test results, you should continue to wear a mask, practice physical distancing, and wash your hands frequently. These are CDC recommendations.

COVID-19 PCR Result POSITIVE -- COVID-19 PCR test result was POSITIVE. See Interpretation.

Positive / Detected. SARS-CoV-2 RNA present. Presumptive Positive. Not all COVID-19 targets detected. Consider the test POSITIVE if there was a high pre-test probability of COVID-19 infection. Consider repeat testing if clinically indicated.

Recommendations

- If your symptoms are mild, it's best to stay home and away from others to keep them safe. Cover your mouth and nose when you cough and sneeze. Wash your hands frequently. Disinfect frequently touched surfaces every day.
- If you're feeling worse you may contact a health care provider for further advise or go to the hospital.
- If your symptoms are severe, such as problems with breathing, persistent chest pain or pressure, new confusion, or bluish lips or face, call 911 or go to the emergency room. For up-to-date information about COVID-19, go to <https://www.cdc.gov/coronavirus/2019-ncov/faq.html> where you can find answers to the top questions everyone asks. COVID-19 PCR Result INCONCLUSIVE -- Not all COVID-19 targets detected. Consider repeat testing if clinically indicated. For Invalid results a new specimen needs to be obtained for retesting. Result Methodology: Nucleic Acid Amplification assays (e.g., PCR) are the primary molecular diagnostic method for SARS-CoV-2 viral RNA detection. This test is only for use under the Food and Drug Administration's Emergency Use Authorization EUA). Test results are for the identification of SARS-CoV-2 RNA, which may be detectable in samples submitted during the acute phase of infection.

Disclaimer: This test is only authorized for the duration of the declaration that circumstances exist justifying the authorization of the emergency use of in vitro diagnostic tests.
